

**PRESS RELEASE** Skellefteå 2 september 2009

## **OPTRONIC SIGNS LONG-TERM DEAL WITH PERTEN INSTRUMENTS**

**Optronicon has signed a co-operation agreement with Perten Instruments, a world leader in quality control of grain, flour, food and feed. The agreement includes manufacturing of instruments in Perten Instruments' product line NIR (Near Infrared).**

– We are happy to have earned this confidence from Perten Instruments, who has spearheaded the development of quality control in grain, flour, food and feed for decades. This is a long-term agreement that enables us to take market shares and strengthen our position in the manufacturing of high tech measuring instruments. The products that we will deliver to Perten Instruments are based on a spectroscopic measurement method, says Rickard Åström, managing director Optronicon.

Manufacturing will start at Optronicon this autumn and includes both laboratory instruments and an online measuring instrument that enables continuous quality control. A result of the agreement is also that Perten Instruments will launch a new product line for the international market. One part of the product line will be a new type of online instrument for products based on cereals, such as grain mills, as well as product lines for feed. With instant quality control, the opportunities to optimise manufacturing processes are significantly improved.

– It's important for us to focus on our core business, which is developing and selling market-leading products within our niche. That makes it important for us to find an active and competitive supplier offering collaboration in advanced optical systems. Optronicon was a natural choice for us as some of our products are based on advanced optical measuring principles, says Sven Holmlund, managing director at Perten Instruments.

Perten Instruments was founded in 1962 and is active in 100 countries around the world. The company's head quarters are located in Stockholm, Sweden.
